

The right data at the right time for the aviation industry

For key aviation industry players, the smart collection and dissemination of data is vital for smooth communication throughout the traveller journey.

Ground handlers need access to up-to-the-minute information across all airlines and airports managed.

Airlines face increased costs and complex logistical challenges with multiple, new directives from governments across the world making booking data for all flights a legal requirement.

We are a team of aviation industry tech specialists, data scientists and software developers. **Flight Register products** provide critical data-driven solutions that supply ground handlers and airlines with the **right data at the right time**, - so that delays can be reduced, operational processes simplified and passengers can benefit from a better travel experience.

Flight Register's industry leading **products**

RAMPS

Provides **ground handlers** with on-the-go, quick and efficient access to all operational messages.

GOVPORT

Provides **airlines** with an efficient and cost-effective PNRGOV and APIS solution for all passengers.
