

Cost effective Airline PNRGOV transmissions for critical government passenger information requirements

Governments are faced with the ongoing challenge of effectively managing border control and traveller identification. In order to meet this need, the messaging standard PNRGOV was created for the processing of passenger data for all global flights and has become an essential law enforcement tool.

Passenger data must be collected by airlines up to 72 hours before check-in, complemented with travel route information and then transmitted to border control authorities at both the departing and arrival country – for every single flight. Business Jets are faced with the challenge of multiple requirements and the associated costs and complexities that regulate how this passenger data should be managed.

Flight Register provides a solution that delivers Business Jets *with an automated, cost-effective PNRGOV solution for all their passengers.*

That solution is GOVPORT

With GOVPORT, you can track all passenger data through a dedicated web portal, while benefiting from multiple security features that keep data both secure and GDPR compliant. Set-up is quick and easy taking usually between just 6-12 weeks. Flight Register's team of experts will guide you through the process and contact with Governments at the right time with the right data. There is an initial fee to get the solution up and running. After that, you can choose to pay 'per flight' or a monthly fixed fee price, depending on flight numbers.

The GOVPORT solution combined with Flight Register's deep, specialist industry knowledge and expertise ensures a smooth integration for this critical piece in your airline's government passenger data compliance.

So how does **GOVPORT** from Flight Register work?

1

GOVPORT can connect directly with your main airline booking system or use the data from a standard digital datasheet collecting all passenger and flight data.

2

Each and every update to passenger data is quickly recognised when either the data is uploaded in the booking system, or a new file is sent.

3

GOVPORT automatically sends a PNRGOV message to each government as the schedule requires, before departure and as soon as the aircraft takes off.

GOVPORT: Key benefits

- Sends standard industry messages to all governments

- Track all your transactions through a dedicated web portal

- Multiple security features that keep your data secure and GDPR compliant

- Scalable: Easy and efficient connection to each new government PNRGOV system. Add more countries easily

- A standard digital data sheet can be filled out for each flight if there is no booking system

- Save money with a cost-effective reduction of manual intervention and time required to provide transaction history

- Save time by reducing the complexity of extracting data from the booking system

- Any disputes can be quickly reconciled with easy access to all your PNRGOV transmissions and their details
