Cost effective Airline PNRGOV transmissions for critical government passenger information requirements

Governments are faced with the ongoing challenge of effectively managing border control and traveller identification. In order to meet this need, the messaging standard PNRGOV was created for the processing of passenger data for all global flights and has become an essential law enforcement tool.

Passenger data (such as PNR history, payments, ticketing etc) must be collected by airlines up to 72 hours before check-in, complemented with travel route information and then transmitted to border control authorities at both the departing and arrival country – for every single flight. Airlines are faced with the challenge of multiple requirements and the associated costs and complexities that regulate how this PNR data is managed.

Flight Register provides a solution that delivers airlines *with an automated, cost-effective PNRGOV solution for all passengers.*

That solution is GOVPORT

With GOVPORT, you can track all passenger data through a dedicated web portal, while benefiting from multiple security features that keep data both secure and GDPR compliant. Set-up is quick and easy taking usually between just 6-12 weeks. Flight Register's team of experts will guide you through the process and contact with Governments at the right time with the right data. There is an initial fee to get the solution up and running. After that, your airline can choose to pay 'per flight' or a monthly fixed fee price, depending on flight numbers.

The GOVPORT solution combined with Flight Register's deep, specialist industry knowledge and expertise ensures a smooth integration for this critical piece in your airline's government passenger data compliance.

So how does **GOVPORT** from Flight Register work?

1 GOVPORT connects directly with the airline's main Passenger Service System (PSS), collecting all passenger PNR and flight data, including past history, ticketing details, and payments.

2 Each and every update to PNR data is quickly recognised, be it from the travel agency, tour operator or passenger. PNRGOV data will therefore have the latest passenger information.

3 GOVPORT automatically sends a PNRGOV message to each departing and receiving government as the schedule requires, before departure and as soon as the aircraft takes off.

GOVPORT: Key benefits

- Sends the required standard industry messages to all governments for each of the airline's flights

- You can track every transaction through a dedicated web portal

- Multiple security features that keep your data secure and GDPR compliant

- Scalable: Easy and efficient connection to each new government PNRGOV system

- Save money with a cost-effective reduction of manual intervention and time required to provide transactional history

- Save time by reducing the complexity of extracting data from the PSS for large PNRs

- Any disputes can be quickly reconciled with easy access to all your PNRGOV transmissions and their details
